

Some data good to have when evaluating the run:

Sample material: wood

The ingoing weight in run 6603 was 39.5 mg

The weight of the residue was 0.4 mg

The sample lowering time was 11.4 s

The time it took after the sample was lowered to getting the first reading on the balance display was 22.0 s

The gas going through the reactor: 40% CO<sub>2</sub> and 60% N<sub>2</sub>

The total flow was 2 l/min (do not include the purge He)

The total pressure was 1 bar
