

Some data good to have when evaluating the run:

Sample material: wood

The ingoing weight in run 6606 was 47.4 mg

The weight of the residue was 1.6 mg

The sample lowering time was 11.4 s

The time it took after the sample was lowered to getting the first reading on the balance display was 20.7 s

The gas going through the reactor: 40% CO₂ and 60% N₂

The total flow was 3 l/min (do not include the purge He)

The total pressure was 10 bar
