

Hilbert Spaces I, 2010

	Page
<u>0</u> Introduction	1
<u>I</u> Inner Product Spaces	2
<u>II</u> Normed Spaces	8
1. Definitions	8
2. Open & Closed Sets, Continuity	8
3. Subspaces and Linear Span	11
4. Real vector spaces	15
<u>III</u> Hilbert and Banach Spaces	16
1. Cauchy Sequences need not Converge	16
2. Completeness	19
3. The Space $L^2(a, b)$	21
4. Convex Sets and the Closest Point	23
<u>IV</u> Orthogonal Expansions	25
1. Orthogonality and Fourier Coefficients	25
2. Least Square Minimization	27
3. Convergence of Orthogonal Sums	29
4. Complete Orthonormal Sets; Basis	31
5. Isometrically Isomorphic Spaces	34
6. Orthogonal Complements	36
<u>V</u> Classical Fourier Series	41
<u>VI</u> Dual Spaces	43
1. Introduction	43
2. Linear Functionals	43
3. Continuous Linear Functionals	44
4. The Dual of a Normed Spaces	46
5. The Dual of a Hilbert Space	51
<u>VII</u> Linear Operators	53
1. Introduction	53
2. Definitions and Examples	53
3. Basic Properties	59
4. Projection Operators	60
5. The Inverse Operator	62
6. Adjoint (Dual) Operators	65
7. Selfadjoint (Hermitian) Operators	70
8. The Spectrum of an Operator	73
9. Infinite Matrices	77
