

# 14<sup>th</sup> international amine oxidase workshop (AO2010)

---

The AO2010 was held in Edmonton, Canada, 18<sup>th</sup> – 21<sup>st</sup> July 2010 at the University of Alberta. The conference gathered many pioneering top scientist in the field of amine oxidases as well as several Ph.D. students and post-docs.

The workshop schedule included talks concerning monoamine oxidases, semicarbazide-sensitive amine oxidase, lysyl oxidase and trace amines. The schedule was tight but each presentation was well prepared and interesting. In addition to oral presentations, a poster session was included in the schedule.

*University of Alberta*

*I gave a 15-minute talk about my own research*

Each evening we had social events (e.g. barbeque, banquet) which were nice opportunities to talk to other workshop participants. The conference gave me a lot of inspiration and many new ideas. My participation to the AO2010 was possible because of the financial support from ISB.
