

MGMS conference “Membrane Proteins: Structure and Function”

6.-8.4.2011 Oxford, UK

Molecular Graphics and Modelling Society (MGMS) is dedicated to the interests of molecular modelling and related aspects of computational chemistry. The conference "Membrane Proteins: Structure and Function" aimed to discuss latest proceedings in the research of membrane proteins' structure and function in experimental and computational contexts. The conference was organized in April 2011 at the beautiful college of Lady Margaret Hall in Oxford.

During the three conference days, 29 presentations altogether were given by many eminent speakers from around the world. In addition, there were around 70 posters present. The topics covered by the conference included ligand-gated ion channels, transporters and GPCRs, among others. Between interesting presentation sessions, there was plenty of time to acquaint myself with posters and get to know and talk with other participants. I also presented my own poster in the meeting and got valuable feedback and comments on it.

The conference was well organized and very interesting. It gave me many good conversations with other scientists and I also got new ideas for my own research work.

I want to thank ISB and MGMS for their financial support.
